PROFESSIONAL SUMMARY

Full-stack developer who ships production-ready web applications end-to-end — architecture, backend, responsive front-end, and deployment — owning projects from database design through live operations. Proficient in JavaScript, TypeScript, React, Next.js, Node.js, and PostgreSQL, with a spec-driven workflow. Available across US and European business hours and fluent in English; seeking remote full-stack roles.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, Python, HTML5, CSS3

Frontend: React, Next.js, React Native (Expo), Astro.js, Responsive UI/UX

Backend: Node.js, REST APIs, PostgreSQL, Supabase (Auth, Edge Functions, Realtime), Row-Level Security, JWT Authentication, Webhooks

DevOps & Tools: Docker, Git, GitHub, Vercel, AWS, Monorepo Architecture, CI/CD, Spec-Driven Development

Integrations & Other: n8n (Workflow Automation), Payment Gateways (Stripe, Mercado Pago PIX), WhatsApp Business Cloud API, Capacitor, Large Language Models (LLMs)

EXPERIENCE

Freelance Full-Stack Developer

Feb 2026 – Present

Self-Employed · Remote

Lottery Management Platform

- Built a multi-app lottery management platform from scratch as a monorepo spanning four applications: a customer-facing betting web app, a point-of-sale app for resellers, an admin dashboard, and a companion Android app (Capacitor) with thermal ticket printing.
- Architected the backend on Supabase (PostgreSQL, Auth, Edge Functions, Realtime), implementing Row-Level Security policies and SECURITY DEFINER RPCs for granular, role-based authorization at the database level.
- Designed a custom CPF-based authentication flow issuing signed JWTs, integrated with Postgres native authorization across all three front-end applications.
- Integrated the Mercado Pago PIX payment gateway with webhook-based confirmation and synchronized official lottery results through a scheduled public-API integration; owned the project solo from architecture to production deployment on Vercel.

Omnichannel Customer Support Platform

- Designed and built an omnichannel customer support solution end-to-end, integrating an open-source helpdesk with n8n workflow automation and the WhatsApp Business Cloud API for unified, multi-agent conversation handling.
- Implemented automated conversation triage and routing plus template-based outbound notifications, following official messaging-platform compliance (approved templates and opt-in handling).
- Deployed and maintained the solution on self-managed, containerized (Docker) cloud infrastructure, optimizing for cost-efficiency and LGPD data-privacy compliance for a public-sector client.
- Authored technical and operational documentation that enabled non-technical staff to run day-to-day operations independently.

Full-Stack Developer

Feb 2026 – Present

Pública Assessoria em Gestão Empresarial Ltda · Contract · Brasília, Brazil (Hybrid)

- Develop full-stack business-management software — contributing to architecture, software design, and feature delivery, and translating business requirements into maintainable, production-ready solutions.

PROJECTS

Mana Realm — Browser-Based Game

Oct 2025 – Present

Personal Project · Self-Employed

- Designing and developing a browser-based game from the ground up in vanilla JavaScript, HTML5, and CSS3 (no frameworks) — handling game logic, rendering, and UI solo. Expected release: late 2026.

EDUCATION

Associate Degree — Systems Analysis and Development

Senac

CERTIFICATIONS & LANGUAGES

Certification: AI Agent Development — AutomatikPRO, Automatik Labs (Feb 2025)

Languages: English (Professional working proficiency) · Portuguese (Native)
