PROFESSIONAL SUMMARY

Mid-level full-stack developer who ships production-ready web applications end-to-end — systems design, backend, front-end and deployment — owning projects from database design through live operations. Proficient in JavaScript, TypeScript, React, Next.js, Node.js and PostgreSQL, with a spec-driven workflow. Fluent in English and available across US and European business hours; seeking remote full-stack roles.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, Python, HTML5, CSS3

Frontend: React, Next.js, React Native (Expo), Astro.js, Responsive UI, User Experience Design (UED), Game Design, Image Editing

Backend: Node.js, REST APIs, PostgreSQL, Supabase (Auth, Edge Functions, Realtime), Row-Level Security, Webhooks

Auth: Auth0, JWT Authentication, OAuth 2.0 / OIDC, Role-Based Access Control (RBAC)

Architecture: Systems Design, Software Design, Full-Stack Development, Monorepo Architecture, Spec-Driven Development

DevOps & Tools: Docker, Git, GitHub, GitHub Actions, CI/CD, Vercel, AWS, Visual Studio Code

AI & Integrations: Claude API (Anthropic), Large Language Models (LLMs), Local LLMs, AI Agents, n8n (Workflow Automation), Payment Gateways (Stripe, Mercado Pago PIX), WhatsApp Business Cloud API, Capacitor

EXPERIENCE

Freelance Full-Stack Developer | Nov 2024 – Present

Self-Employed · Remote

- Serve small businesses and public-sector clients with no in-house engineering team, owning delivery end-to-end — requirements, systems design, database modeling, front-end, deployment and post-launch support — and ship every project solo.
- Standardized delivery on a spec-driven workflow across a TypeScript, React, Next.js, Node.js and PostgreSQL stack, with monorepo architecture, Docker and CI/CD via GitHub Actions and Vercel, keeping every application in live operation without an ops team.

Full-Stack Developer | Feb 2026 – Present

Pública Assessoria em Gestão Empresarial Ltda · Contract · Remote

- Sole developer for a consultancy with no internal engineering team: turn business requirements into full-stack business-management software in TypeScript, React, Node.js and PostgreSQL, owning systems design, software design and feature delivery end-to-end.
- Deliver and maintain solutions now in day-to-day operational use, backed by technical and operational documentation that lets non-technical staff run them independently.

SELECTED PROJECTS

Lottery Management Platform | Freelance Client · 2026

Stack: TypeScript · React · Next.js · Node.js · Supabase (PostgreSQL, Auth, Edge Functions, Realtime) · Row-Level Security · JWT · Capacitor · Mercado Pago PIX · Vercel

- A lottery operator ran betting, reseller sales and management on paper, with no reliable way to confirm payments or settle results.
- Built a four-application monorepo from scratch — customer betting app, reseller point-of-sale, admin dashboard and an Android app with thermal ticket printing — enforcing Row-Level Security and SECURITY DEFINER RPCs for role-based authorization at the database level, plus a custom CPF-based authentication flow issuing signed JWTs.
- Integrated the Mercado Pago PIX gateway with webhook confirmation and a scheduled public-API sync of official results, replacing manual ticketing with real-time confirmation and automated settlement; owned the project solo from architecture to production on Vercel.
- Now serves ~200 monthly customers and has processed 3,000+ tickets in production; simplified UI and UX across successive releases to keep it usable by non-technical resellers and bettors.

Omnichannel Customer Support Platform | Pública · 2026

Stack: n8n · WhatsApp Business Cloud API · REST APIs · Webhooks · Docker · self-managed cloud infrastructure

- A municipal public-health institution serving a city of ~140,000 handled citizen support across scattered channels and personal devices, creating LGPD exposure and no shared view of open conversations.
- Integrated an open-source helpdesk with n8n and the WhatsApp Business Cloud API, adding automated triage and routing plus template-based outbound notifications compliant with approved-template and opt-in rules.
- Deployed on self-managed, containerized (Docker) cloud infrastructure assembled from free and low-cost tooling, cutting recurring spend to little beyond per-message platform fees and improving the margin on the contract.
- Consolidated every channel into one LGPD-compliant multi-agent queue now serving 10,000+ residents, and continue to provide direct support to the institution.

Mana Realm — Browser & Desktop Game | Personal Project · Oct 2025 – Present

Stack: JavaScript (vanilla) · HTML5 · CSS3 · NW.js · Game Design · Gamepad Input

- Building a fast-paced bullet-hell action game solo — design, engine, rendering, UI and art — from the ground up in vanilla web technologies, tuned to run cleanly on low-end hardware.
- Ships as NW.js desktop builds for cross-OS coverage plus a browser build for zero-install access, with full gamepad support; consistently positive playtest feedback. Expected release: late 2026.

EDUCATION

Associate Degree — Systems Analysis and Development · Senac · 2024

LANGUAGES

English (Professional working proficiency) · Portuguese (Native)
